THE REPLY FILED 04 January 2008 FAILS TO PLACE THIS APPLICATION IN CONDITION FOR ALLOWANCE.						
The reply was filed after a final rejection, but prior to or on the same day as filing a Notice of Appeal. To avoid abandonment of this application, applicant must timely file one of the following replies: (1) an amendment, affidavit, or other evidence, which places the application in condition for allowance; (2) a Notice of Appeal (with appeal fee) in compliance with 37 CFR 41.31; or (3) a Request for Continued Examination (RCE) in compliance with 37 CFR 1.114. The reply must be filed within one of the following time periods:						
 a) The period for reply expires 3 months from the mailing date b) The period for reply expires on: (1) the mailing date of this A 	Advisory Action, or (2) the date set forth	in the final rejection, wh	ichever is later. In			
no event, however, will the statutory period for reply expire Examiner Note: If box 1 is checked, check either box (a) or TWO MONTHS OF THE FINAL REJECTION. See MPEP 7	ater than SIX MONTHS from the mailin (b). ONLY CHECK BOX (b) WHEN THI	g date of the final rejecti	on.			
Extensions of time may be obtained under 37 CFR 1.136(a). The date have been filed is the date for purposes of determining the period of exunder 37 CFR 1.17(a) is calculated from: (1) the expiration date of the set forth in (b) above, if checked. Any reply received by the Office late may reduce any earned patent term adjustment. See 37 CFR 1.704(b) NOTICE OF APPEAL	on which the petition under 37 CFR 1. dension and the corresponding amount shortened statutory period for reply orig r than three months after the mailing da	of the fee. Art Unit: 2193

Continuation of 11. does NOT place the application in condition for allowance because: The applicant argues in pages 2-4 that the combination of the cited reference by Schenk and the admitted prior art fails to dsiclose the claimed invention of claim 19, particularly the limitation "filtering the signal vector and determine the correction vector as a function of the correction vector as cited in the independent claim 19.

The examiner respectfully submits that the only difference between the cited prior arts and the current invention according to the applicant is the signal is filtered prior generating the correction vector. For this particular difference, the filter is very well-known in the art of processing the raw transmittion data. Since the claims do not clearly disclose the type and how the received signal is filtered, the cited prior arts clearly discloses the difference in either alone or in combination. As clearly mentioned in the previous Office action, the input signal vector is Xi and the output filtered signal is Yi with ocrresponding coefficients Ci, and the correction vector ris determined based on the Yi. Thus, either the cited prior art and the admitted prior art clearly disclose the signal is filtered prior entering the correction vector generation. Further, the response of argument cited in previous Office action does not contradict, but rather it further supports the rejection wherein either the citations support the missing limitations. In view of the admitted prior art, the filtering is done with the IFFT as seen in Figure 3. The applicant is reminded that the description of the admitted prior art is corresponding to the cited reference by Schenk DE 19850642 as cited in page 3.

The applicant also argues in pages 6-8 that claims 1 and 7 of the '925 patent and the admitted prir fails to teach the claimed invention. The examiner respectfully submits that the above response to argument is also applied to this argument in order to clearly show the missing limitation "filter the signal".
